UAA Professional Development Seminar Series

## **Northern Lights Boulevard Chester Creek Crossing Emergency Repair**

Presented by Erica Jensen, PE, PTOE,  
Principal Project Engineer, CRW

A sink hole was discovered in Northern Lights Boulevard in December of 2019. By early September 2020, the roadway and culvert below it was completely repaired! Learn how this fast-paced project fixed a failing culvert in less than nine months from start to construction completion.

Hailing from the Missouri side of Kansas City, Erica grew up with a perfect grid-system of roads but not knowing what a well or septic system was. Her adventurous spirit led her to Alaska in 2003 but she balanced that with her love of everything neat and orderly by obtaining a B.S. in Civil Engineering and an M.S. Engineering Management from the University of Alaska Anchorage. As a principal and project engineer at CRW Engineering Group, Erica works mostly on municipal, state, and aviation projects designing roads, trails, site plans, school sites, and airport taxiways. When she's not entangled in autocad or excel, you can find Erica running, rock climbing, skiing, mountain biking, camping, or (her personal favorite) traveling! Erica loves a good debate and has learned that the ability to laugh at herself is a valuable life skill. She's the resident Fun Master and CRW and is the focal point for all kinds of office shenanigans.
