

AY20 Expedited Program Review Recommendations

Program Review: Geomatics (BS)

Programs Included: BS Geomatics

1. Remove the tracks within the BS and focus the curriculum on training surveyors. Additionally, the program should work with Civil Engineering to integrate CE majors into GEO A156 and stop teaching GEO A155. The revision should be completed in AY21 for implementation in fall 2021.
2. Revise the program so it can be taught with existing faculty positions.
3. Revise the AAS as part of the BS revision. Align lower division core courses to streamline and reduce the number of lower division courses that need to be taught.
4. Rename the program to better reflect currency and promote visibility and shift specialized accreditor to EAC.
5. Increase enrollment and completion rate in the AAS.
