

2021 ANNUAL ACADEMIC ASSESSMENT REPORT FORM (Due October 15 to the dean)

PROGRAM SECTION (Due to the dean on October 15)

Submitted by: Rachael Hannah, Associate Professor, rmhannah@alaska.edu

Program(s) covered in this report: Biological Sciences BA/BS.

If you selected "Other" above, please identify. (100 characters or less)

College: College of Arts and Sciences

Submission date: 10/8/2021

Campuses where the program(s) is delivered: ⊠Anchorage □KOD □KPC □MSC □PWSC

Specialized accrediting agency (if applicable): Select Specialized Accrediting Agency or N/A.

If explanation is necessary, such as only some of the certificates and degrees are covered by the specialized accreditation, briefly describe:

INSTITUTIONAL STUDENT LEARNING CORE COMPETENCIES

In 2020, UAA launched a consensus-based, deliberative process to identify the key skillsets that help students achieve academic and post-graduation success. After a year-long process that included students, faculty, staff, administrators, alumni, and employers, the UAA community identified four "core competencies" at the heart of a quality UAA education. Students develop mastery of these competencies through curricular (e.g., courses), co-curricular (e.g., internships, conferences), and extracurricular (e.g., student clubs) learning experiences.

After the stakeholder-based process in AY20, UAA conducted a pilot project focusing on the core competency of Personal, Professional, and Community Responsibility (PPCR). This decision was based on input from the 2020 Annual Academic Assessment Retreat.

Question #1 below is designed to engage program faculty in thinking about how they can or already do promote student learning in this core competency.

Revised 9-3-2021 Page 1 of 5

- 1. Personal, Professional, and Community Responsibility: The knowledge and skills necessary to promote personal flourishing, professional excellence, and community engagement.
 - What would you hope a student would say if asked where in your program or support service they had the opportunity to develop proficiency in this Core Competency? (500 characters or less)
 - Many courses in the biological sciences curriculum intentionally engage students to explore their communities and test biologically related question(s) that they observe and connect them to their community. This course related research allows them to connect to their community and potentially increase their identities as scientists. Students have opportunities to volunteer and engage with UAA Brain Bee, UAA Stem Day, and community engaged projects. BIOL A465 prepares students for UR.

In an effort to promote community engagement and professional excellence at the same time, we feel that it would be worth exploring community based CURE (Course Based Undergraduate Research Experiences) development in our lower division lab courses. Our Experiential Learning courses already offer inquiry based research experiences adding the community component would provide students an opportunity to give back while learning.

PROGRAM STUDENT LEARNING OUTCOMES

2. Please list the Program Student Learning Outcomes your program assessed in AY21. For each outcome, indicate one of the following: Exceeded faculty expectations, Met faculty expectations, or Did not meet faculty expectations.

Example: Communicate effectively in a variety of contexts and formats – Exceeded faculty expectations.

Apply the process of science and construct knowledge through observations, experimentation, quantitative reasoning, and hypothesis testing.

Revised 9-3-2021 Page 2 of 5

3. Describe your assessment process in AY21 for these program student learning outcomes, including the collection of data, analysis of data, and faculty (and other, e.g., advisory board) conversations around the findings. (750 characters or less)

To evaluate the learning outcome in AY 21 our committee of 3 faculty members collected artifacts from lower division and upper division Experiential Learning (EL) courses (BIOL A243, BIOL A273, BIOL A311, BIOL A342, BIOL A442, and BIOL A465). We then used the Process of Science Rubric and evaluated a sample of artifacts. We compared median and mode between the lower division and upper division ELs. In addition we collected IR grade data and demographics for these courses. We continue to college ETS data (not assessed this year because of the PSLO). On October 1 we presented a draft of our findings at a faculty meeting for discussion.

4. What are the findings and what do they tell the faculty about student learning in your program? (750 characters or less)

Assessment of BIOL_A243 and BIOL_A273 courses used AY 20/21 IR grade data as baseline understanding of achievement of PSLO (92.5% pass, 86% A or B). Assessment artefacts were graded independently by the committee with a rubric to assess achievement of PSLO#2 for experiential learning BIOL_A243, 273, and 4 upper division courses (311, 342, 442, and 465). Assessment reflected steady achievement as students progressed from 243/273 EL (median 2.8/4) to 311/342 EL (median 2.8/4), with challenges achieving the expected outcomes at advanced 442/465 EL (median 2.4/4). This finding is based on a small sample size in 400-level EL, but hilights utility of artefact analysis to provides basis for feedback to BIOLSCI course instructors for improvement.

5. Based on the findings, did the faculty make any recommendations for changes to improve student achievement of the program student learning outcomes? Please describe the recommended action, what improvement in student learning the program hopes to see with this change, the proposed timeline, and how the program will know if the change has worked. If no recommendations for changes were made, please explain that decision. (750 Characters or less)

During our Faculty discussion and review of the programmatic results, we will review PLSO #2 in 2 years to determine student engagement with the program post pandemic pedagogy, which is currently affecting our abilities to immerse students in an experiential lab. To increase transparency, the rubric used to assess PLSO #2 will be provided to the instructors for assignment design and creation of student learning options that are intentional toward achievement of this PLSO. The sample size of artifacts for this PLSO #2 will be increased in subsequent years. Moreover, artifacts will be collected from our advanced independent study courses (BIOLA498/499). This will likely provide greater understanding of students learning and their quantitative reasoning. Currently, our students are not meeting proficiency (median; 2, mode; 2 n = 34) in this metric.

Revised 9-3-2021 Page 3 of 5

PROGRAM IMPROVEMENTS AND ASSESSING IMPACT ON STUDENT LEARNING

to make changes intended to improve student achievement of the program student learning
outcomes? Please check all that apply.
☐ Course curriculum changes
□Course prerequisite changes
☐ Changes in teaching methods
□Changes in advising
□ Degree requirement changes
□Degree course sequencing
□Course enrollment changes (e.g., course capacity, grading structure [pass/fail, A-F])
□Changes in program policies/procedures
□Changes to Program Student Learning Outcomes (PSLOs)
□College-wide initiatives (e.g., High Impact Practices)
□Faculty, staff, student development
⊠Other
☐ No changes were implemented in AY21.
If you checked "Other" above, please describe. (100 characters or less)
Redesigning our assessment plans and process to use IR data and more course artifacts.

6. In the past academic year, how did your program use the results of previous assessment cycles

7. Do you have any information about how well these or other past improvements are working? Are they achieving their intended goals? Please include any data or assessment results that help you demonstrate this. (750 characters or less)

We made the decision to remove the ePortfolio as a degree requirement because it put a tremendous burden on our students that did not help students achieve the PSLOs because reflection of science is built into the scientific method. In addition, the implementation and process of using ePortfolios was unduly burdensome for faculty. Moving to artifact collection via a google drive folder repository removed obstacles to assessing PLSO 2. By moving to faculty driven artifact gathering we were able to see possible challenges with students attaining proficiency of quantitative reasoning in our experiential lab courses.

8. Programs are not required to respond to question #8 below for their report due on October 15, 2021. Question #8 will be required for the next round and moving forward.

Revised 9-3-2021 Page 4 of 5

9. Do you have any examples of post-graduate success you want to highlight? For example, major scholarships, the percent of students who pass licensure examinations, the percent of students accepted to graduate programs, the percent in post-graduation employment in the field or a related field. (750 characters or less)

Instead of providing numbers, we wanted to highlight a particular student, who graduated from UAA with a B.S. in Biological Sciences with honors last Spring (2021). While at UAA he was a BUILD-EXITO student who worked in the Briggs lab. The skills he learned in bioinformatics (BIOL A455 and independent research) made him a highly sought-after graduate student. He ultimately accepted (from 4 other offers) a highly prestigious Ph.D. graduate program at John Hopkins University. They even offered him a signing bonus along with his research assistantship.

DEAN SECTION (Due to the program on January 15)

1. Based on the program's responses above, what guidance and support do you have for the program moving forward? Is there a particular area the program should focus on?

The current undergraduate research opportunities in the department provide students with valuable experiences; the department is encouraged to build upon these research experiences oin order to make them available for more undergraduate students.

It is recommended that all programs review their Program Assessment Plan to ensure clear inclusion of the new UAA Core Competencies and in particular to address the closing of any equity gaps in the program.

2. Is there something the program is doing particularly well in terms of its processes for the assessment and improvement of student learning, including the closing of equity gaps, that might serve as a model for other programs? If yes, please explain. You may skip this question.

Their forays into experiential learning have been successful and could be a model for other departments and programs.
