Micah Hahn, PhD., is an assistant professor of Environmental Health within the UAA Institute for Circumpolar Health Studies. Her work focuses on understanding the health impacts of climate change and working with communities to develop locally-relevant adaptation and resilience-building strategies.

In Alaska wildfire is part of the natural environment with many benefits, but for residents of Alaska it can come a bit too close to home. Fortunately, there are actions residents and communities can take to reduce your wildfire risk. In 2019 several wildfires burned throughout Alaska and from this experience we can learn a lot about living with wildfire and how to not get burned.

Living with wildfire
Dr. Jen Schmidt

Fortunately, there are actions residents and communities can take to reduce your wildfire risk. In 2019 several wildfires burned throughout Alaska and from this experience we can learn a lot about living with wildfire and how to not get burned.

Using public health science to learn how wildfires affect human health in Alaska
Dr. Micah Hahn

Many environmental changes that are occurring due to climate change have impacts on human health. In Alaska, the frequency and size of wildfires is increasing, like much of the western U.S. In this webinar, Dr. Micah Hahn will share an overview of the health impacts of climate change and describe how we can use public health science to learn how wildfires are affecting the health of Alaskan communities. Together we will learn about key questions that Alaskan communities are trying to answer as they adapt.
